**Completely turnkey** no complicated network, wireless or web based server software to install, configure or support.

**We take care of everything.**

**Quick and Easy to Use** with all the benefits of a WAN (wide area network) and wireless network without having to install, maintain & support complicated network server software.

## 1. Reduce your asbestos (ACM) data management risk

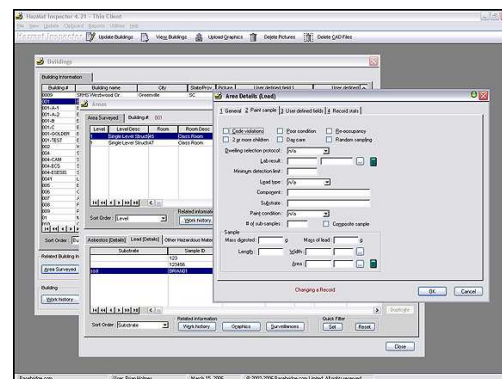

- Help protect your personnel and on-site workers.
- Eliminate paper forms and error prone redundant data entry.
- Use an inexpensive Pocket PC OS based handheld device or pen tablet computer to conduct follow up surveillances.
- Provide instance searchable access to your critical data.
- Create reports when you need them, based on your latest data.
- Know that the data you are looking at is the latest and most up-to-date.

Mobile Handheld edition, which works together with the computer edition

## 2. Application & data access anywhere anytime

- Securely access your ACM data and Hazmat Inspector application from an unlimited number of PC/workstations anywhere anytime using an easy to use security connect program and Internet connection.
- The Hazmat Inspector application looks and acts as a software application installed locally. Not a watered down browser version.
- Upgrades are free for members.
- Maintenance personnel can carry your sites complete ACM history with them in their shirt pocket. Using the Hazmat Inspector mobile edition they can conduct follow up surveillances with a tap of the screen.
- 3<sup>rd</sup> party access is easy. Just issue them a username and password attached to buildings you select. Its that easy.

Our hazmat inspection and data management solution enables you to track and manage data for an unlimited number of buildings and clients from one central data and application source. We provide this technology as a hosted service that is an easy, powerful and cost-effective way for service and engineering firms to conduct & manage site inspection data. The hosted Hazmat Inspector turnkey solution looks and acts like a Windows application installed locally but you have access to a central data source from an unlimited number of PC / workstations anywhere anytime.
