The Hosted Web Edition is completely turnkey. No software to install all you need is an Internet connection and a browser.

We take care of everything

TankTrack360 is the only easy to use comprehensive risk potential priority system **RPPS** for identifying the failure risk potential of home oil tanks. Identifying which of your clients home oil tanks are at risk for failure, before they fail.

100% Web based, all you need is a browser, we take care of the rest!

Using years of on-site inspections data and based on a sophisticated risk analysis algorithm, **TankTrack360** can dramatically reduce future losses due to oil spills.

By adding either in-house or contracted inspection services, you get an added value service to the policy holder while controlling critical maintenance schedules calculated from the program.

Basebridge.com Ltd. provides the **RPPS** solution as a web based hosted, service and is an easy cost-effective way for companies to track and manage policy holders or clients.

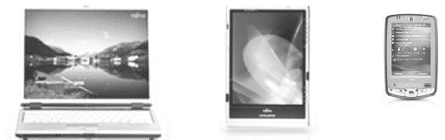

The program provides data management with all the benefits of a networked (LAN/ WAN) environment- anytime, anywhere access to data that is easily shared and carefully protected

Field inspectors, consultants and managers across the country can have access to general data, reports and the current status for any item being tracked by the system.

While using the **RPPS** hosted Internet solution, you eliminate costly developments costs and are entitled to free support and system upgrades.

We have proven with existing insurance company clients that we can save your company a significant amount of money by identifying high risk tanks **before they fail**.

Help save the environment by reducing the number of unnecessary oil tank spills.

Inspections made easy
