Hazmat360 features

Cloud based

Inspect, Track & Manage:

Asbestos (ACBM) by homogeneous area or area surveyed (level & room), area details (design-material or component)

Lead by paint inspection, paint, dust and soil sample

Other hazardous materials including designated substances

Daily Air Quality monitoring

Waste Logs

Work Histories

Follow-up Surveillances

Photos, PDF's, Excel and CAD files

Floor plans with the ability to insert linkable hotspots

Bulk Sample (Asbestos sample lab results) Entry

Reports including simple to use Ad-Hoc Report Wizard

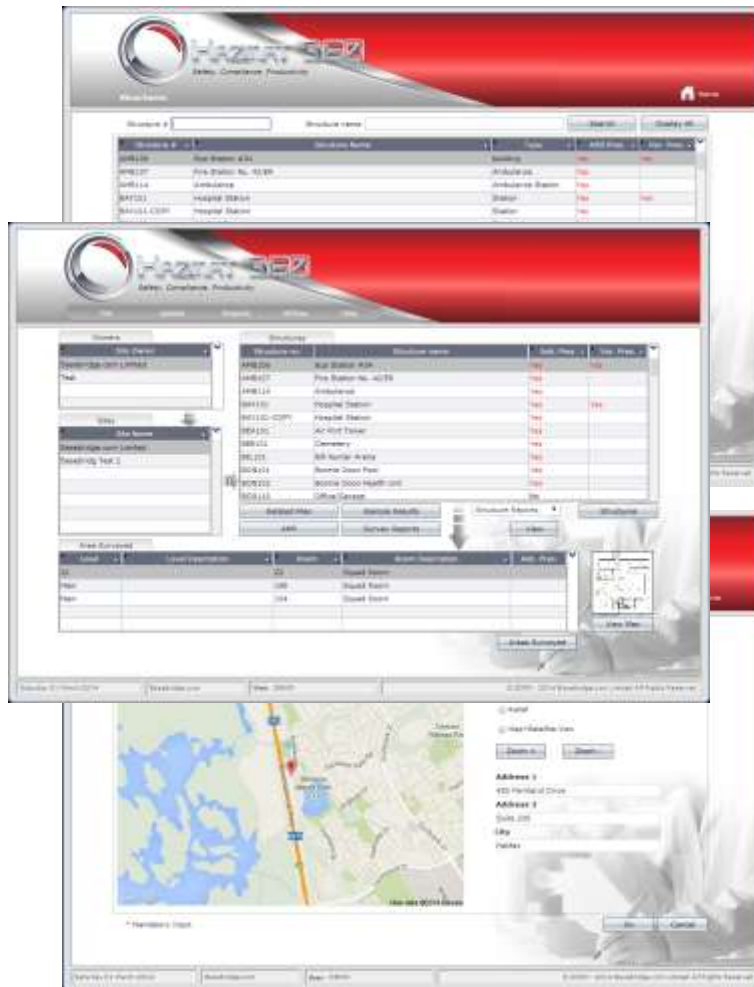

Assets - manage assets, photos and warranty

Completely turnkey. No software to install all you need is an Internet connection and a browser

We take care of everything

Hazmat 360

Our **Cloud** based Hazmat 360 system is a dedicated ACM (*asbestos containing material*) software application-database registry. With the ability to track and manage lead and other hazardous materials. Very simple to use all you need to access your account is a Internet browser such as Google Chrome or FireFox. Centralized data gives you peace of mind that the critical data you are accessing is the latest and most up-to-date data. Safe, secure and always backed up.

Dedicated CLOUD based application

Personnel can quickly access critical asbestos data from a dedicated web based application.

No software to install.

No need to hunt through filing cabinets for reports that may be outdated.

Dramatically reduce site inspection time

Eliminate paper forms & potentially error prone redundant data entry.

Use a notebook or tablet pc to gather all your site inspection or follow-up surveillance data.

Value added business solution

Using any Internet browser your clients can quickly and easily access their critical data and the Hazmat360 System anywhere anytime.

You are in full control and determine who has access and to what level of access they have. Such as updating, view and print reports etc.

Upload your logo and modify header and footer text for all reports. Your personnel or clients can securely access the Hazmat360 System and your

Environmental and Property Management firms

The Hazmat360 System allows your firm to conduct on-site asbestos (ACM), lead and other hazardous material inspections-audits dramatically quicker and more efficiently. It is ideal for providing your clients a software solution for managing and tracking all their asbestos, lead, air monitoring and other hazardous material data.

All from one easy to use system. As a value added business solution it can easily pay for itself many times over in a very short period of time.

School Boards and Universities

The Hazmat360 System allows you to use multiple consultants / 3rd party vendors to conduct and manage your site asbestos, lead and other hazardous material inspection data dramatically quicker and more efficiently.

It is also ideal for providing your personnel quick easy access to critical centralized data anywhere anytime.

Multiple languages

- The Hazmat 360 System languages are standard English, optional French or Spanish.
- Other languages upon request. Simply select the language you wish the program to use from a drop down menu.

Rapid Data Entry

- Rapid Asbestos data entry page for your on-site or in house asbestos inspection data collection.
- Enter in all your data and when ready post the results into your database.
- No need to jump from screen to screen.
- Sticky form option. Select this option and you can enter multiple records without leaving the data entry form.
- Great for field data collection.

3rd party data Integration

- The **Hazmat360** System can communicate with your other maintenance systems such as SAP.
- Optional—Please call for further information and pricing.

Copy and Duplicate

- Easily copy records and all child or associated records.
- Make exact duplicate of the highlighted record with the click of a button.
- Ideal for when inspecting similar structures, areas or materials.

Photo, CAD, PDF, Word, Excel and text files

- Manage and store all your photo, CAD, PDF, Word, Excel and text files in one convenient easy to access location.
- All related files available from Structures, Area Surveyed and Area Details.

MSDS (Material Safety Data Sheets)

- Upload and track all your MSDS's in one convenient spot.

Floor - Level plan linkable hotspots

- Upload floor - level plans and insert hotspots.
- And link those hotspots to critical data.
- Provides a very quick and efficient way to view exactly what areas on your floor - level plan your hazardous materials are located.

User management & security center

- An easy to use but very powerful user management system.
- You now have the capability to turn on and off virtually every single control in the program.
- This means you can limit a users access to rights to any button, tab, report etc.

Provide 3rd party - client access

- Simply issue a username and password that will block all but the information you want a 3rd party vendor to see or update.
- Environmental and engineering service firms can use this feature as a value added business solution for your clients.
- School boards, Universities etc. use to control costs and monitor progress of 3rd party inspection / audits.

Lookups - dropdown pick lists filtered to owner

- Create individual "Owner/Client" lookups - dropdown pick lists.
- Environmental and engineering service firms can use this feature to filter lookups - dropdown pick lists by client.

Bulk lab results data entry

- Enter your sample ID lab results once.
- The **Hazmat360** System will automatically populate the results throughout the database.
